🚩 South African

Software engineering student with technical proficiency in Java, Python, SQL, and OOP principles. Peer tutoring experience includes backend development support, collaborative curriculum work, and structured code reviews. Data structures and algorithm design expertise supports development of scalable, high-quality solutions.

📁 PROFESSIONAL EXPERIENCE

10/2025 – 08/2026 **Peer Tutor/ Tech Mentor, WeThinkCode_**
George ,
South Africa
Mentored students across
backend curriculum (Java,
Python, SQL, OOP, System
Design, Git) through code
reviews and pair
programming

🎓 EDUCATION

10/2025 – Present **Software Engineering NQF 6, WeThinkCode_**
George,
South Africa
Project-based, work-simulated learning environment focused on job-ready skills. Training covers Java, Python, SQL, OOP, system design, automated testing and Git/GitLab, with team delivery in Agile-style iterations. Work is managed through GitLab tickets, branches and code reviews, across both greenfield and brownfield codebases.

02/2021 – 11/2023 **IT & Computer Science L4, College Of Cape Town**
Cape Town,
South Africa
Learned how to build desktop applications using Visual Basic .NET and Windows Forms. Also covered SQL, Systems Analysis and Design, Computer Literacy, Data Communication & Network, Computer Hardware and Software and multimedia / UI design — including wireframing in Figma.

02/2025
Pietermaritzburg,
South Africa

Diploma In ICT AND APPLICATION DEVELOPMENT,
Durban University Of Technology
Not Completed

LANGUAGES

english

Xhosa

SKILLS

SQL • Java programming • object oriented programming • Problem solving and analysis •
Git version control • python programming language • Spring Boot framework •
RESTful API • Team collaboration • Agile practices • Maven • JUnit 5 • GitLab

INTERESTS

Cloud Computing • Cyber security/ Ethical Hacking • AI/ Machine Learning •
Building user focused Solutions

COURSES

AWS Foundations, AWS (Amazon Web Services)

Covered core cloud concepts, AWS global infrastructure,
EC2, S3, IAM, VPC, pricing models, and cloud security best practices.

PROJECTS

07/2026 – 09/2026

[Robot Worlds Brownfield Project](#)

Java, Maven, JUnit 5, SQLite, Git/GitLab

- Extended and refactored an inherited multiplayer robot server/client codebase in a team of 5
- Wrote unit and acceptance tests, including multi-client scenarios, to verify behaviour from the outside
- Refactored the server into an instantiable class with non-blocking start/stop and made world state thread-safe using ConcurrentHashMap
- Used CodeScene health scores to find and ticket low-quality classes for refactoring
- Added persistence with a DAO/Repository pattern over SQLite; managed work through GitLab tickets, branches and merge-conflict resolution

[HairBySentle | E-commerce Platform \(Backend\)](#)

Java, Spring Boot, MySQL, Maven

- Built the backend for a hair-product e-commerce site for a real client
- Designed the MySQL schema (e.g. the customer table) to match the existing signup form
- Implemented customer registration and email verification flows with Spring Boot REST endpoints
